The Only Manufacturer of Ophthalmic Lenses in Finland Launches Anti-Fog Lenses – One of a Kind Coating Process in the Nordic Countries

Eyeglasses fog easily especially in winter when going from cold outdoors to warm indoors. Furthermore, wearing face masks has made fogging a topical year-around challenge.

Finnsusp, the only manufacturer of ophthalmic lenses in Finland introduces new lens coating technology that solves the common problem of fogging lenses.

“We can now offer a solution to fogging lenses with the help of anti-fog coating. The new technology is a lot more effective and comfortable option for the users than using anti-fog sprays that tend to create a film on the lens”, Sales and Development Director of Optics, **Tomi Korhonen** says.

OLOlinssit® by Piiloseet lenses are manufactured in Finland.

“OLOlinssit® by Piiloseet product range offers options in every price group. Our goal is to offer high-quality, individualised lenses for every intended use and situation in life. Anti Fog lenses are suited extremely well for outdoor sports or work, where wearing fog-free lenses increases safety too.” Korhonen continues.

The easy-to-use, long-term lens coating does not degrade the optical quality or other features of the lens. The coating breaks down large water molecules on the surface of the lens so that no distracting visible condensation is produced. This invisible liquid film then evaporates from the surface of the lens without interfering with the user’s vision. People who constantly move from outside to inside like forklift and delivery drivers can benefit from the anti-fog feature.

“For our family business, this is a significant half a million euro investment in development of the Finnish lens manufacturing industry. Our new coating machine is one of a kind in the Nordic Countries”, Managing Director **Riikka Järvinen** says.

Finnsusp has been developing, testing and manufacturing ophthalmic lenses, eye care products and contact lens care products for over four decades. Finnsusp’s products are sold in over 40 countries around the world.
